Cacttus Shield – Intrusion Report #2

Team 16

Cacttus Education

AD Server / Tickets Server / Admin Server

We discovered unauthorized RDP sessions on the AD server (ad.team16.isucdc.com) using the service account "svc_webapp". The attacker gained these credentials from the .env file on the compromised MGMT machine. RDP access was confirmed on the Tickets, AD, and Admin hosts. We killed all unauthorized sessions and changed the svc_webapp credentials.

```
C:\Users\Administrator>qwinsta /server:ad.team16.isucdc.com
 SESSIONNAME       USERNAME                 ID  STATE   TYPE
 services                                    0  Disc
 rdp-tcp#59        administrator             1  Active
                   melissa.robles            2  Disc
 console                                     4  Conn
                   svc_webapp                5  Disc
 rdp-tcp                                65536  Listen
```

MGMT Server — Reverse Shell Attempt

At 5:24 PM, Cynet detected a reverse shell attempt on the MGMT server. The attacker tried to run a networked bash shell under the "cdc" user to gain remote control of the machine. Cynet automatically blocked the attempt.

Alert#	31
Alert Name	Reverse Shell
Detection Time	Sat, 21 Feb 2026 17:24:15 GMT
Severity	**High**
Remediation Action	N\A
Remediation Action Status	Success

Host ID	4
OS Version	AlmaLinux release 8.4 (Electric Cheetah)
Process Path	/usr/bin/bash
File SHA256	ADB2054596DBA9C3A0BF724F14CB20DC31980EBAD6C77CB501AABF458ECDEE64
Rule Name	Linux - Networked Process Executed Shell
Process Command Line	/usr/bin/bash sh
