Incident Response Template:

Incident Summary

Incident Name/ID: MGMT Intrusion

Date/Time Detected: Feb 21 21:37:57

Detected By: Joe & Lucy

Severity (High/Medium/Low): High

Brief Description: Unauthorized Access

Current Status (Open/Contained/Resolved):

Incident Details

What Happened:

- There was unauthorized access to our MGMT (201.203.200.30) via debugger endpoint
- Attempted Lateral movement into our AD (201.203.200.10)

How It Was Discovered:

- Unusual terminal activity in multiple log locations

Affected Systems/Accounts:

- MGMT 201.203.200.30

Incident Type (Malware / Unauthorized Access / Phishing / Misconfig / DoS / Other):
Unauthorized Access

Timeline

Time | Event/Action | Source

21:37:57 | Unauthorized Access | Journactl logs

07:26:06 | Attempted Lateral Movement | Event Viewer

Containment

Immediate Actions Taken:

- Changed passwords of domain administrators

Systems Isolated/Blocked:

- N/A nothing to block since it was through browser

Temporary Fixes Applied:

- Passwords changed. Ensured lateral movement did not take place. Debugger system was locked down and removed from production.

Eradication & Recovery

Cause/Entry Point (if known):

- Debugger via browser

Threat Removal Steps:

- N/A

Systems Restored/Rebuilt:

- N/A

Passwords/Keys Reset:

- Domain Administrators

Evidence Collected

Logs Pulled:

- Event Viewer - AD & Admin
- Journalctl - MGMT

Suspicious Files/Indicators:

- A kerberos error message was received on AD indicating attempted either a pass the hash or pass the ticket attack.

Screenshots/Artifacts:

Communications

Internal Notifications:

- "SIEM" Alert (iScore)

External Communications (if required): N/A

Lessons Learned

What Went Well:

- We quickly identified the source, and prevented/verified lateral movement, and changing credentials

What Needs Improvement:

- Verifying that our endpoints are locked down ahead of time

Follow-Up Actions:

- Continue to monitor logs
