Our systems are completely compromised.

AD VM

- This is how the eventlog looks like on the AD VM.

```
S C:\Users\Administrator> Get-EventLog -LogName Security -Newest 30 | Where-Object {$_.EventID -eq 4624} | Select TimeG
nerated, Message | Format-List

imeGenerated : 4/25/2026 2:25:12 PM
essage       : An account was successfully logged on.

               Subject:
                       Security ID:            S-1-0-0
                       Account Name:           -
                       Account Domain:         -
                       Logon ID:               0x0

               Logon Information:
                       Logon Type:             3
                       Restricted Admin Mode:  -
                       Virtual Account:                %%1843
                       Elevated Token:         %%1842

               Impersonation Level:            %%1833

               New Logon:
                       Security ID:            S-1-5-18
                       Account Name:           AD$
                       Account Domain:         TEAM12.ISUCDC.COM
                       Logon ID:               0x2e2e614
                       Linked Logon ID:                0x0
                       Network Account Name:   -
                       Network Account Domain: -
                       Logon GUID:             {B20CD3A5-83EA-BB72-5B48-CCB1D13187BA}

               Process Information:
                       Process ID:             0x0
                       Process Name:           -

               Network Information:
                       Workstation Name:
                       Source Network Address: ::1
                       Source Port:            60442

               Detailed Authentication Information:
                       Logon Process:          Kerberos
```

In the VM, there aren't any unusual looking groups in the admin group

```
PS C:\Users\Administrator> net localgroup administrators
Alias name     administrators
Comment        Administrators have complete and unrestricted access to the computer/domain

Members

-------------------------------------------------------------------------------
Administrator
Domain Admins
Enterprise Admins
The command completed successfully.

PS C:\Users\Administrator> _
```

This shows currently running scripts on powershell which includes malicious ones. I believe this is one of the ways that our systems were compromised

```
PS C:\Users\Administrator> Get-WmiObject Win32_Process | Select-Object ProcessId, Name, CommandLine | Format-List

ProcessId   : 0
Name        : System Idle Process
CommandLine :

ProcessId   : 4
Name        : System
CommandLine :

ProcessId   : 252
Name        : smss.exe
CommandLine :

ProcessId   : 352
Name        : csrss.exe
CommandLine :

ProcessId   : 428
Name        : wininit.exe
CommandLine :

ProcessId   : 548
Name        : services.exe
CommandLine :

ProcessId   : 556
Name        : lsass.exe
CommandLine : C:\Windows\system32\lsass.exe

ProcessId   : 724
Name        : svchost.exe
CommandLine : C:\Windows\system32\svchost.exe -k DcomLaunch

ProcessId   : 784
Name        : svchost.exe
CommandLine : C:\Windows\system32\svchost.exe -k RPCSS

ProcessId   : 968
Name        : svchost.exe
CommandLine : C:\Windows\System32\svchost.exe -k termsvcs

ProcessId   : 976
Name        : svchost.exe
```

On a lot of processes, we can see that the command line is empty, which means that it is probably a malicious program, as a legit one always states its location.
This was possibly done through initial access being established, and then a promotion into admin privileges by getting passwords into one of the admin accounts.

- **One way could have been through the open RDP port, which could have been exploited to bypass the firewall (there was a rule to allow connections certain ports)**

DB

- Mysql has completely shut down and is showing access denied for anyone who tries to access it. I think red team has went into privileges and changed them to make sure their users can access it

LP VM

```

                    Key Length:     0
```

This shows that someone has been logging onto the LP VM there are multiple more that are saying that there are people before logging onto these things. These are probably because of there being open ports that we did not see inside of our VMs'.

This is also most likely how they were able to get onto our VM and add the red team flag + capture our flag.
