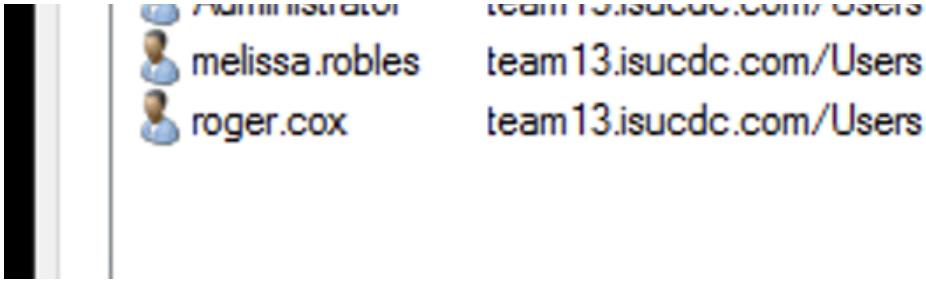
Intrusion report

After the multiple intrusions earlier today we have had none for the past 3 hours since the last report. With no more flags/information leaked out of the network while we work to disable unneeded/unknown users in our servers along with identifying other ways the hackers could have entered.



(Two users we had to disable)

Although we have not detected any intrusions by third party groups we have had multiple servers go down for unknown reasons. While third party intrusions might be behind this we have found no evidence to support that. With the servers going down over authentication errors or the timing out of the connection.

AD LDAP	ad.team13.isucdc.com	389	None	10	11:55 a.m.
