Team 5 Cyber Incident Report 1

This document contains 4 incidents during the initial report 1 phase.

Incident 1

1. Incident Overview

Date of Report: 2/21/26
Reported By: Team 5 members

2. Incident Details

Date and Time of Incident: 2/21/26 @ 7:24 am
Type of Incident: Data breach, flag stolen

3. Detection and Response:

How was the incident detected? Flag taken
Immediate Actions Taken: determining how access was obtained, checked the endpoint, inspected abnormal logs, identified lack of authentication validation

4. Impact Assessment

Systems Affected: Ticketing Machine
Data Compromised: TICKETS Forged Ticket, no evidence of further compromise

5. Containment and Eradication

Containment Measures: established authentication for the endpoints, restricted unauthorized access

6. Recovery

Recovery Actions: explored the situation to prevent any further access through the endpoints, tested for proper authentication
Status of Recovery: kept the situation contained; nothing else happened as a result

7. Root Cause Analysis

Root Cause: non-authenticated endpoint allowed for ticket generation
Contributing Factors: missing endpoint validation, insufficient access control enforcement

8. Lessons Learned

What went well? Rapid detection and investigation as to how the flag was stolen
What could be improved? Stronger endpoint validation and authentication
Recommendations: enforce authentication on all APIs, add logging and alerting

9. Follow-Up Actions

Actions to Prevent Recurrence: authenticate all api endpoints, audit all ticket endpoints

10. Additional Information

Other Relevant Information:

Incident 2

1. Incident Overview

Date of Report: 2/21/26
Reported By: Nick Guyette, Khalid Mohammed

2. Incident Details

Date and Time of Incident: 2/21/26 @ 6:39-7:50
Type of Incident: attempted service connections via different brute force methods

3. Detection and Response:

How was the incident detected? Monitoring activity logs for the services
Immediate Actions Taken: investigated the logs, cross-referenced AD to make sure no users were successfully granted access, and ensured no compromised accounts

4. Impact Assessment

Systems Affected: AD, ticketing machine, management backend
Data Compromised: none

5. Containment and Eradication

Containment Measures: monitored logs and made appropriate changes to ensure no accounts were going to be given access, or existing accounts would be forced

6. Recovery

Recovery Actions: confirmed no password resets occurred
Status of Recovery: systems intact, no unauthorized users granted access

7. Root Cause Analysis

Root Cause: external brute force attempts against exposed services
Contributing Factors: publicly exposed authentication services

8. Lessons Learned

What went well? Active monitoring allowed for early detection
What could be improved? Faster alerting for quicker response, stronger rate-limiting

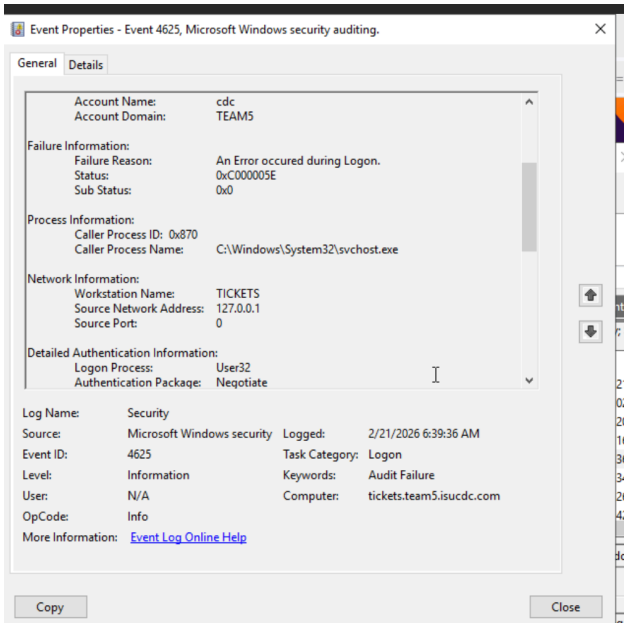
Recommendations: stricter account lockouts, continue active monitoring

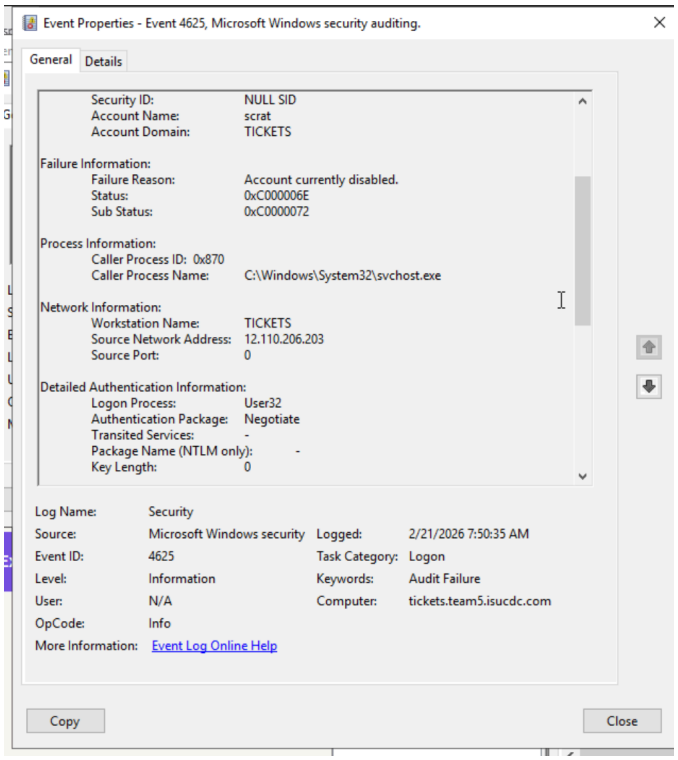
9. Follow-Up Actions

Actions to Prevent Recurrence: review firewall logs, monitor for credential reuse attempts

10. Additional Information

Other Relevant Information:





Incident 3

1. Incident Overview

Date of Report: 2/21/26
Reported By: Khalid Mohammed

2. Incident Details

Date and Time of Incident: 2/21/26 at 7:44 am
Type of Incident: intrusion to WWW via default credentials

3. Detection and Response:

How was the incident detected? Monitoring logs, detected suspicious root login activity
Immediate Actions Taken: Coleman Pagac, a team member, killed all active root sessions, kicked active users, and reset the password credentials

4. Impact Assessment

Systems Affected: WWW
Data Compromised: none

5. Containment and Eradication

Containment Measures: killed sessions and immediately changed the credentials

6. Recovery

Recovery Actions: began exploration to understand how they got into the service. Noticed there was a set of default creds, so we immediately changed them.
Status of Recovery: successful prevention of any data leakage

7. Root Cause Analysis

Root Cause: didn’t change a set of default credentials allowing for root access
Contributing Factors: incomplete credential hardening

8. Lessons Learned

What went well? We successfully prevented the situation from escalating any further and allowed full access to the system
What could be improved? Verifying that all credentials have been changed
Recommendations: enforce a stronger password policy, implement better authentication

9. Follow-Up Actions

Actions to Prevent Recurrence: disable root ssh, change default passwords

10. Additional Information

Other Relevant Information:

```

Feb 21 07:49:48 www sshd[981714]: Accepted password for roger.cox from 12.110.206.225 port 54060 ssh2
Feb 21 07:51:21 www sshd[981829]: Accepted password for cdc from 199.100.16.101 port 56317 ssh2
```

Incident 4

Date of Report: 2/21/26
Reported By: Coleman Pagac
Incident Details

Date and Time of Incident: 2/21/26, 6:32 AM – 7:45 AM
Type of Incident: Unauthorized access / Backdoor account creation

Detection and Response:

How was the incident detected? Noticed unfamiliar accounts in AD and traced them back to Logon IDs that didn't match our legitimate session (0x46317).

Immediate Actions Taken: Identified the Red Team's Logon IDs, deleted all unauthorized accounts, reset KRBTGT twice, and confirmed all their sessions logged off.

Impact Assessment

Systems Affected: Active Directory
Data Compromised: Administrator credentials stolen via DCSync. Five backdoor accounts were created:

- trwbox — 6:32 AM (Logon ID 0x289A68C)
- tompohl — 6:33 AM (Logon ID 0x289AEC0)
- kilroy — 7:11 AM (Logon ID 0x2948E39)
- sam — 7:26 AM (Logon ID 0x298C333)
- tompohl2 — 7:45 AM (Logon ID 0x29DFA60)

Containment and Eradication

Containment Measures: Deleted all five accounts, reset KRBTGT twice, verified all Red Team sessions are logged off via Event ID 4634.

Recovery

Recovery Actions: Removed the accounts, reset KRBTGT, checked AD for anything else out of place.
Status of Recovery: Contained. All Red Team sessions confirmed ended, no further activity.

Root Cause Analysis

Root Cause: Red Team used DCSync to grab Admin credentials, then logged in with their own sessions and started creating accounts alongside us.
Contributing Factors: DCSync permissions weren't locked down, no alerting on new account creation.

Lessons Learned

What went well? Found the accounts, traced them to specific sessions, cleaned them up quickly.
What could be improved? Need alerts for account creation and multiple Admin sessions happening at once.

Recommendations: Lock down replication rights, set up alerts on account creation events.

Follow-Up Actions

Actions to Prevent Recurrence: Restrict DCSync permissions, monitor for new account creation in real time.

Additional Information

All five Red Team sessions were Logon Type 3 (network/remote). They were in AD at the same time as us for over an hour.
